Wall Mounted Spring Driven Reel

Dimensions

SAFETY

1. Do not use reel at higher pressures or temperatures than listed on the back of this bulletin.
2. Remove all spring tension before beginning disassembly process.

INSTALLATION:

A flexible hose connection must be used between the hose reel inlet and the source of supply to prevent possible misalignment and binding. Turn over the page for more detailed instructions and drawing configuration.

MOUNTING:

This reel is configured to be wall mounted. The hose reel is equipped with a universal mounting bracket so that it can be mounted on the floor, wall or ceiling. In order to modify its factory set position the hose guide arm can be moved to the position desired by removing the 1/4-20 hex nuts (4) fastening the hose guide enclosure to the reel back cover. Shift the hose guide enclosure to the desired position and replace the 1/4-20 hex nuts. NOTE: For proper installation in wall mount applications, ensure reel is mounted with inlet on the right as you are facing the reel. Failing to do so could cause latching issues.

LUBRICATION:

Hose reel spring and bearings are factory lubricated and require no further lubrication.

REPLACING HOSE:

1. Remove 1/4-20 hex nuts (4) which fasten the hose guide enclosure to the reel back cover and pull off the enclosure.
2. Wind spool flange clockwise-facing swivel-until spring is tight.
3. Back off three turns and latch.
4. Insert hose through roller guide.
5. Connect hose fitting to swivel joint and secure hose with clamps.

ADJUSTMENTS:

To adjust spring tension, add or remove wraps of hose from the spool, one wrap at a time until desired tension is obtained.

REPAIRS:

Extensive repairs should be performed only by an authorized serviceman or factory to avoid damage which may void your warranty. Remove all spring tension before beginning disassembly process.
