

REVOLUTION

L'INNOVATION AU SERVICE D'UNE CUISINE SAIN ET SAVOUREUSE
INNOVATION SERVING HEALTHY AND TASTY FOOD

100% INNOVATION

- A new proprietary material from Revol (patent pending in France) with novel composition and properties.
- Suitable for all types of heat source, including induction.
- Higher thermal-shock and mechanical properties than any other type of non-porous culinary ceramic known today.
- Unlike some materials, Revol's new material won't deteriorate naturally with wear and tear (scratches, rust, ageing, etc.).

100% SAFE

- Completely nonporous ceramic, absorbs no fats, odours or bacteria.
- Made exclusively of natural components; contains no heavy metals (lead, cadmium) or fluorinated coatings (PTFE); emits no volatile organic compounds when heated. *Comparative analysis by the French Ceramics Association, Nov. 2010*
- Since there are no toxic components, Revolution is chemically inert and 100% recyclable.

100% PRATICAL

- Goes from the freezer to the microwave oven, or from induction or gas heat to a traditional oven, or from the table to the dishwasher.
- Easily cleaned, thanks to its naturally anti-adhesive enamelled surface.
- Second to none for preparing, simmering, baking and presenting your recipes in a single dish.
- The ideal material to keep your food warm (induction) on your buffet table and showcase it attractively at the same time.
- The bold design and wide choice of colours adds exceptional style to the ware.
