FEC300/500/750 Flue Collector Installation Instructions

WARNING: Only a qualified electrician or authorized service representative should perform this work. Disconnect the oven from all electrical power before cleaning, performing maintenance or service work. Danger of electrical shock exists if this instruction is ignored. **DO NOT ATTEMPT TO WORK ON AN OVEN THAT IS HOT, SERIOUS BURNS MAY RESULT.**

TOOLS REQUIRED: Electric Drill, Self-tapping sheet metal screws

1. Place Flue Collector over the 5 inch flue on top of oven.
2. On the Draft Inducer Motor, notice which way the air flows and install with air going OUT.
3. You may connect the Draft Inducer Motor directly to the Flue Collector itself or in line after 90 degree elbow.
4. The Flue Collector is 6 inch venting. You may keep it 6 inch all the way to the outside but do not go smaller than 5 inch anywhere in the system.
5. Chimneys that pass through the roof should have a rain cap.
