

AUTOQUOTES SPEC SHEET SELECTION PROCESS FOR STEAM OR GAS DISH MACHINES

It was recently brought to our attention that gas or steam tank heat options, when selected during the buildup process, do not automatically sync with the corresponding spec sheets in AutoQuotes. Electric tank heat does automatically sync when selected, though by default it also remains the selection even when steam or gas heat are selected. Unfortunately, this is a programming limitation in AutoQuotes, though they do plan to address it in the future.

In the meantime, there is a workaround within AutoQuotes to obtain a gas or steam spec sheet when either gas or steam are required.

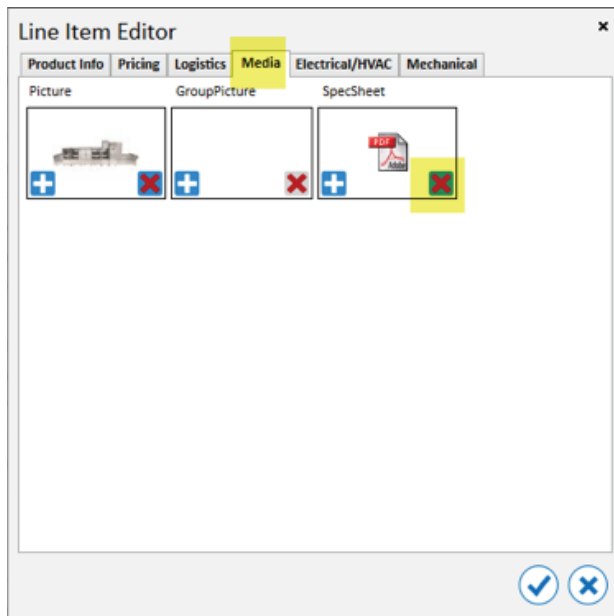

The screenshot shows the AutoQuotes spreadsheet interface. The 'Catalog' tab is active, and a search filter is applied: 'Search by Model, Manufacturer, Brand'. A context menu is open over the first item, with 'Edit Line Item' highlighted. The spreadsheet contains the following data:

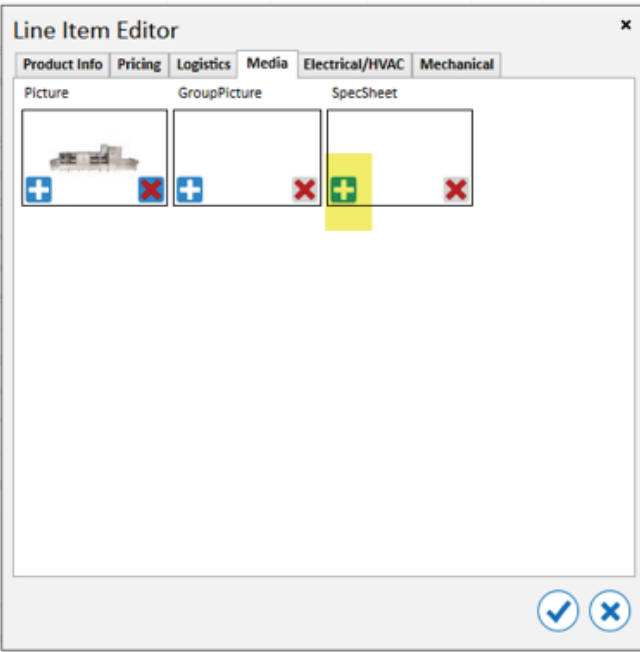

ItemNo	CAD/Revit	Mfr	Model	Qty	Unit	Category	Spec	List

INSTRUCTIONS FOR THE WORKAROUND:

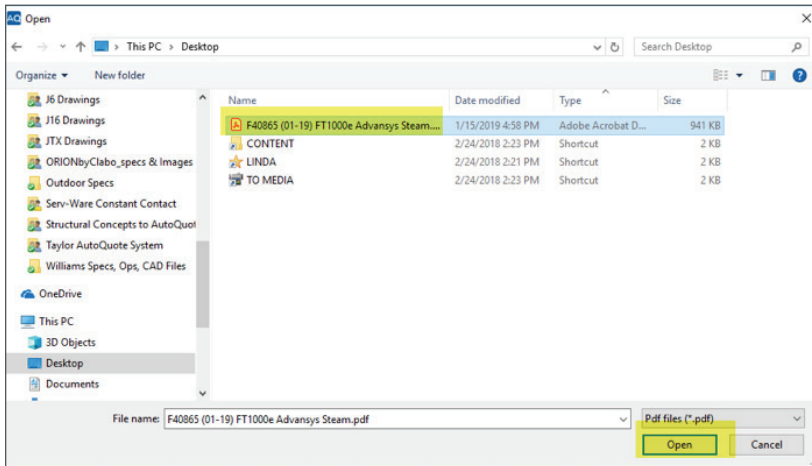

- 1 On your spreadsheet (project) right click and select "edit line item"

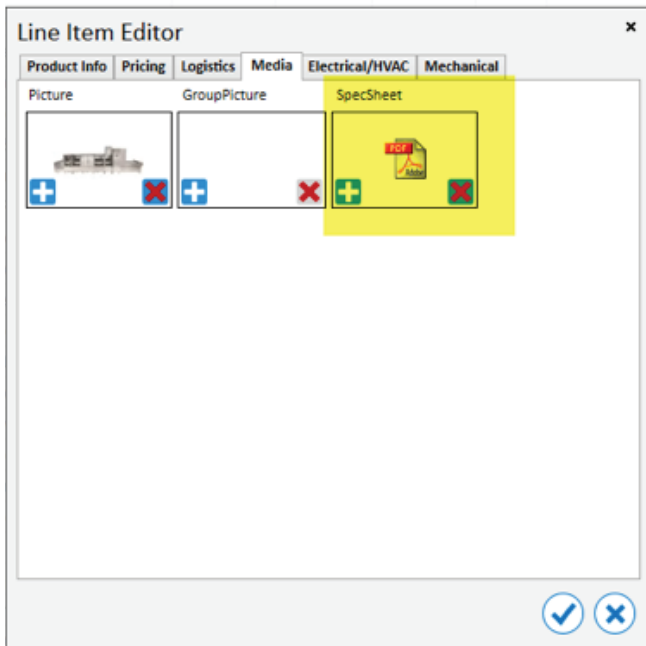

- 2 Click on the Media tab and delete the Spec Sheet by clicking on the Red X.

3 Then, select the Plus sign to add the spec sheet you want.

4 Select the spec sheet from wherever you have it saved (e.g. you can go directly into the AQ catalog, click on the link to the appropriate spec sheet (e.g. steam), and save it to your desktop).

5 You now have the steam spec sheet to add to your quote. Click on the + to add.
