

2237-04 and 1236-70 Espresso / Café Thermometers

Any professional Barista knows a perfect Cappuccino or Latte cannot be achieved without correctly frothing milk by steaming it into hot milk and foam. Here, temperature monitoring is very important. The key to steaming milk is to build volume before it gets too hot. Using the Cooper-Atkins Espresso Thermometer can simplify the process.

2237-04

Specifications

- 0° to 220°F / -10° to 104°C
