## Refrigeration, Plumbing, and Electrical Access Locations

Knockout holes will appear on the side (and back of C1RB24) specified for refrigeration hook-up. The series of knockouts from top to bottom allow installation flexibility to run refrigeration lines, electrical, and drain lines in various locations. There are line covers provided on the interior of the box to cover the lines.

## Configuring Bar Profile Coolers for Draft Beverage Dispensing

All Glastender bar profile coolers can be configured for draft beverage dispensing. Please note that a minimum 17" wide door opening is required for full size (i.e., 16" diameter) 1/2 barrel kegs. Refer to the capacity statements in the Product Directory or Specification Sheet for the sizes and quantities of kegs each unit will hold.

## Direct Draw Draft Beverage Towers

Glastender Beverage Towers come standard with the stainless steel faucets and shanks necessary to dispense keg beer, wine, soda, coffee, or cocktails. See individual spec pages for complete information.

## Tower Cooling Kits

Direct draw beverage towers are chilled by air from inside the host cooler. This is especially important for draft beer, as warm faucets cause the beer to foam.

### PRIMARY REGULATOR KITS

Primary regulators are used to step down the CO<sub>2</sub> or nitrogen pressure from the main source. A tank mount CO<sub>2</sub> primary regulator attaches directly to the CO<sub>2</sub> tank. A bulk or in-line CO<sub>2</sub> primary regulator is used to splice into a CO<sub>2</sub> line when the CO<sub>2</sub> tank is shared by more than one system. A tank mount nitrogen primary regulator is used with pre-blended nitrogen and CO<sub>2</sub> or pure nitrogen gas. Each primary regulator kit includes 50 feet of nylon braided hose.

PRK-BC	Bulk CO <sub>2</sub> primary regulator kit	15#
PRK-TN	Tank mount nitrogen primary regulator kit	15#

### SECONDARY REGULATOR KITS

The REG-CO2-LP1 secondary regulator kit is normally mounted inside the direct draw cooler and connects to the gas line coming from the externally mounted primary regulator. For installations with more than one keg on tap, also order the appropriate manifold kit(s). When no external source of CO<sub>2</sub> is available, a 5 pound CO<sub>2</sub> cylinder may be stored inside the cooler, which will require the REG-CO2-HP regulator. A manifold kit will also be required if there is more than one keg on tap.
